Co-Founders, Management:

Courtney Fieldman, CEO

Abhishek Purohit, COO

Kiptoo Magut, CTO

Gary Allen

Category: i.e. Energy Generation, Energy Distribution & Storage, Energy Efficiency,

Year Founded: 2025

Year Competed CTO: Rocky Mountain/ 2025

Number of Employees: # 7

Funding to Date: 0.

Funding Stage: Pre-seed / early stage

Use of Funds: Product Refinement, Pilot, Commercialization

Business Description: SPARK helps commercial property operators cut rising energy costs and protect asset value through AI-driven energy intelligence. We target multifamily and hotel properties over 50,000 sq. ft., where energy is still an unmanaged cost eroding NOI. Our model combines hardware-enabled AI with a subscription platform, offering rapid ROI and scalability across entire portfolios, without disruptive retrofits or vendor lock-in. Customers gain up to 30% lower energy costs, easier building operations through automation and predictability, and boosted property value via stronger NOI.

Product/Market Fit: Commercial properties face unmanaged energy costs rising 20–25% annually, eroding NOI. In 50+ interviews, most multifamily and hotel operators said they'd adopt a solution that cuts costs without retrofits or added staff. SPARK's Intelligent Energy Hub installs in hours, automates control across all major loads, and reduces costs by up to 30%, delivering rapid ROI, minimal disruption, and portfolio-wide scalability with active pilot discussions underway to validate performance and drive early adoption.

Business Model: SPARK integrates hardware, AI software, and property operations. We design the Intelligent Energy Hub in-house, manufacture with U.S. partners, and install via certified electricians for rapid, portfolio-scale deployment. Sold directly to multifamily portfolios, revenue comes from hardware sales and recurring SaaS, with partnerships in real estate, utilities, and aggregators expanding reach

and unlocking new revenue streams.

Customers/LOI: SPARK has secured pilot commitments with a multifamily portfolio operator, the National Renewable Energy Laboratory (NREL), and the Electric Power Research Institute (EPRI). These pilots will validate cost savings, operational efficiency, and scalability across different building types. Additional discussions are underway with hotel portfolio operators to expand demonstration sites and co-fund market entry.

Management: SPARK is led by a former U.S. Clean Energy Advisor and COP28 Strategy Lead, supported by an experienced software and electrical engineer and a business executive with early-stage growth expertise. To meet our 18-month goals, we're adding hardware engineering to speed certification and a sales lead to convert pilots into portfolio deployments, backed by contract engineers and real estate networks.

Technology Status: TRL = 4. SPARK's Intelligent Energy Hub architecture is patent-pending, with proprietary AI decision algorithms and integration protocols. The system is designed for rapid retrofit, universal compatibility, and automated control across major building loads. Validation will be conducted through pilots with a multifamily portfolio, NREL, and EPRI, providing independent performance data to support certification and market launch.

Impact and Sustainability: Deploying SPARK's IEH in 10,000 buildings would cut over 4 TWh of electricity use annually, avoiding ~2.8M metric tons of CO₂—equal to removing 600,000 cars from the road. By eliminating retrofit and staffing barriers, SPARK brings advanced energy management to under-resourced properties, advancing energy equity.

Markets: Our first target is multifamily buildings over 50,000 sq. ft., ~560,000 portfolio-managed properties, a \$5.6B market growing in urgency from rising utility costs and NOI pressures. The second is retail strips with 102,000 centers with landlords and tenants representing a \$1.28B TAM, entered in year three via property management networks. The third is hotels with 25–100 rooms, ~92,000 properties worth \$920M, targeted in year four through brand partnerships.

Competition: Direct competitors are emerging AI-enabled platforms like PassiveLogic and commercial-focused smart panel providers, while indirect options include energy monitoring tools like Lucid or GridPoint. SPARK outperforms by combining AI automation, portfolio scalability, and rapid installs without retrofits.

Financial Projections

\$, in thousands	Year 1	Year 2	Year 3
Revenue	2,166,750	18,954,000	47,387,850
Profit	-2,084,955	11,844,383	36,442,551
Funding Needs	2,000,000	15,000,000	0
