Agentic AI for Intelligent Energy

SEE energy use in real-time.

DECIDE when, where, and how to use energy.

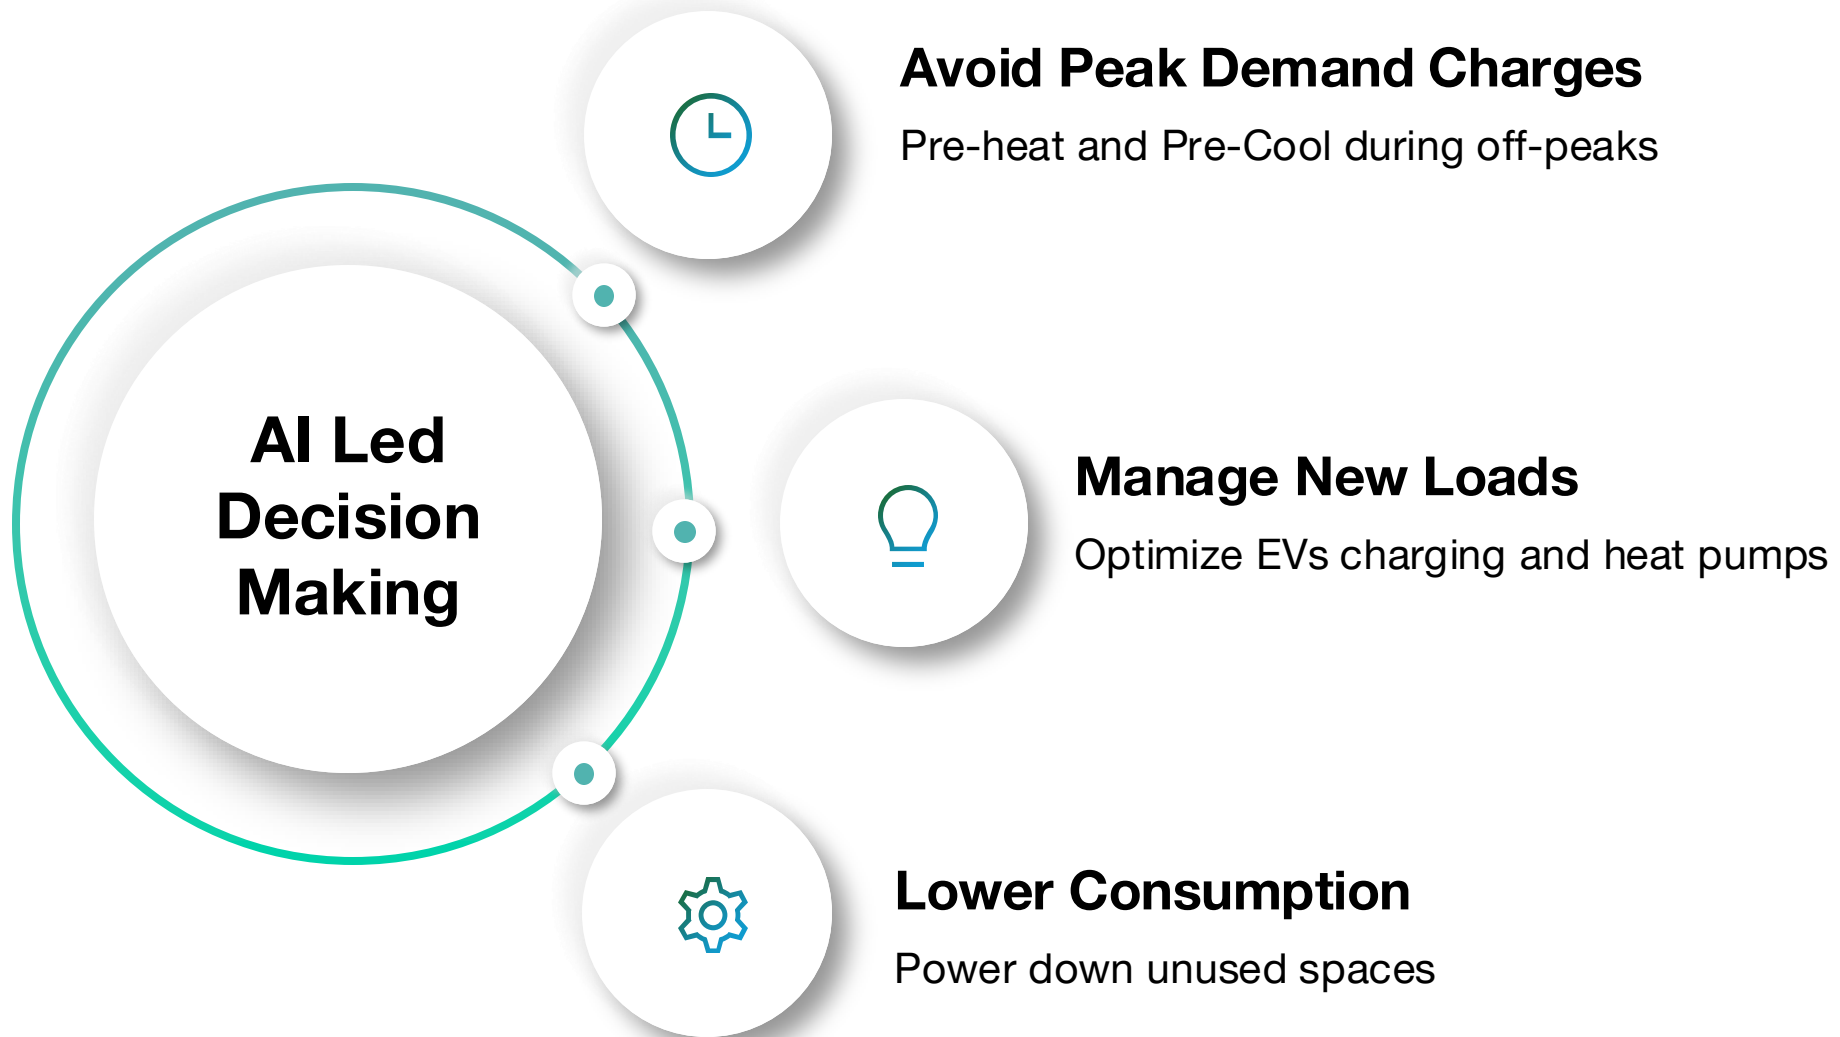

CONTROL based on cost and comfort.

Intelligent Energy Hub: **EVERYTHING** on one platform.

NO tradeoffs between cost and comfort

What it **Means** for Property Managers

30%

Lower Bills
30%

Energy X Buildings Landscape

- **High spend, high waste:** U.S. buildings spend ~\$195B on energy—costing multifamily buildings \$60B in inefficiency and poor control.
- **No intelligence at scale:** Over 95% lack automation or real-time energy management—especially in mid-sized properties.
- **Underserved market:** 500K+ small-to-midsize buildings (schools, clinics, offices, retail, etc.) are too complex and unviable for legacy building management systems.

and performance standards

Our Strategic Advantage

As electrification, AI demand, and DERs scale, cities need flexibility, not just capacity. SPARK gives them intelligence at the edge.

Edge-Based Intelligence

Autonomous AI runs onsite for instant optimization – without cloud delays or manual input.

Designed to Scale

Works in offices, data-centers, retail and homes - designed for broad deployment across cities and communities.

Modular and Adaptive

Built to grow with you—add new systems like solar or EVs as you go, while optimizing your energy.

Network-Ready

Designed to turn each IEH into a smart node in intelligent energy network enabling load shifting, bidirectional trading
